

# Ossec server

## 1. Implementation

- Network-setup in Ossec-server
  - Creates a password for ossec-server and configures so that this container will be active with internet.

```
---
- name: Set root password
  command: vzctl set 1003 --userpasswd root:{{container_root_password}}

- name: copy interface ifcfg-eth1 file
  template: src=ifcfg-eth1 dest=/vz/private/1003/etc/sysconfig/network-
scripts/

- name: ossec-server Network restart
  command: vzctl exec 1003 service network restart
```

- dependencies

```
dependencies:
  - common-vars
```

- Ossec-server Private NetworkConfigures the network-interface in /etc/sysconfig/network-scripts/ifcfg-eth1 of ossec-server with the following fields

```
DEVICE=eth1
BOOTPROTO=static
ONBOOT=yes
NM_CONTROLLED=no
IPADDR=10.100.1.3
GATEWAY=10.100.1.1
NETMASK={{net_mask}}
```
